Dear Tim

Thank you for the prompt delivery of the GEM steam traps.

As I explained, due to the failure of the existing steam trap/ non-return valve arrangement, condensate from the steam-heated boiling pan was being taken through a temporary trapping set-up to drain. As the pan was passing 2 litres per minute of condensate, this was very wasteful so the quick turnaround from order to supply of traps was much appreciated.

In addition, a before-and-after comparison showed that the rate of temperature increase, ten degrees in four minutes up to 80°C, was matched exactly by the new GEM trap returning condensate to the holding tank.

Given this I shall be using GEM traps to remedy any and all further trapping problems.

Yours sincerely

Iain Stewart
Maintenance Technician
